

Appln. S.N. 10/696,335
Amdt. dated November 27, 2006
Reply to Final Office Action of September 28, 2006
Docket No. 200313765-1

2

In the specification:

Please revise paragraph [0033] as follows:

As mentioned above, the dissolution/precipitation reaction occurs, thereby forming the pre-ceramic object upon dispersion of a jetted solubilizing binder (220) into the calcium phosphate-based powder (240). The jetted solubilizing binder (220) includes water or other wetting agents, humectants, and surfactants. Additionally, a pH modifier may be added to the binder.
